G3-Genes Genomes Genetics

Group Members:
Srishti Karakoti
Parvathy Neelakanta Sarma
Amrut Patel

Respective contributions of the group members:

We decided as a group to work on the project together over google hangout. We scheduled daily meetings to work on the project. Every member contributed equally to develop and test the project. Every member worked on different tasks such as researching the most appropriate packages to use, writing functions, and writing regular expressions.

Major challenges faced while working on the project:

The biggest challenge we faced was getting started with the project and figuring out what packages we needed and exactly what we needed to execute. It took us a while to learn what different packages have to offer.

We struggled sometimes with the use of regular expressions and referred to online resources to understand how to use it in our code.

We often got the following error due to issues with formatting:
Error in open.connection(x, "rb") : URL using bad/illegal format or missing URL
After several tries we were able to make the code work

However, sometimes when we ran the code, we got an error due to client-side issues.
